## AIRA airaFace

As compliance, health, and safety standards are becoming increasingly complex, solutions that can help ensure safe spaces for employees and customers are in high demand. The AIRA airaFace solution uses a proprietary facial recognition engine and faces from multiple inputs such as cameras, tablets, and NVRs to provide highly accurate facial recognition capabilities. airaFace enables customers to simplify access points and clearances for employees and partners, enhance security and safety, and reduce labor costs with customizable automated identification and access systems.
